Enhancements

• Cybersecurity enhancements.
• Adjusted the accuracy of the transmission (tx) rate to the second decimal.
• Enhanced the group check logic for WLAN, 50 ms roaming, security mode, and WAC settings.
• Network information (including IP, subnet mask, and gateway) has been added to the "Reboot" and "Save Configuration and Restart" pages to show the expected network settings after performing these tasks.
• The same SSID can now be used on both WLAN interfaces.

Bugs Fixed

• The certificate authentication is sometimes rejected by the server.
• The web server may sometimes crash due to a memory leak.
• Incorrect language on the Turbo Chain Status page.
• The real-time-clock (RTC) does not work if the system is not powered on for a long time.

Changes

• Changed the RF type default value from "B/G/N Mixed" to "2.4G N". Wireless.
• Changed the Wireless default state on the Operation Mode page from "enabled" to "disabled".
• Changed the default value of the Client lease time for the DHCP server from 5 days to 14400 min.
• Changed the default MAC Filters policy from "accept" to "drop".
• Changed the default state of HTTP and Telnet on the Console Settings page from "enabled" to "disabled".
• Removed the ability to press Enter to trigger the ping function.
