MPC-2121 HW UM Introduction

Overview

The MPC-2121 Series 12-inch panel computers with E3800 Series processors deliver a reliable and durable platform of wide versatility for use in industrial environments. All interfaces come with IP66-rated M12 connectors to provide anti-vibration and waterproof connections. With a software selectable RS-232/422/485 serial port and two Ethernet ports, the MPC-2121 panel computers support a wide variety of serial interfaces as well as high-speed IT communications, all with native network redundancy.

The MPC-2121 panel computers are designed with a wide, -40 to 70°C temperature range, and come with a fanless, streamlined enclosure designed for highly efficient heat dissipation, making this one of the most reliable industrial platforms available for vibration prone, harsh, hot, outdoor environments. The MPC-2121 also features a 1000-nit LCD panel offering a sunlight-readable, projected-capacitive, multi-touch screen, providing an excellent user experience.

Package Checklist

The MPC-2121 panel computer is shipped with the following items:

- 1 MPC-2121 panel computer
- 1 2-pin terminal block for DC power input
- 6 panel mounting screws
- 1 M12 phone jack power cable
- 1 M12 Type A USB cable
- Quick installation guide (printed)
- · Warranty card

NOTE

Notify your sales representative if any of the above items are missing or damaged.

Product Features

The MPC-2121 panel computer has the following features:

- 12-inch panel computer
- Intel® Atom™ Processor: E3845 1.91 GHz
- -40 to 70°C wide-temperature, no fan/no heater design
- 1000-nit sunlight-readable LCD (500-nit is also available)
- Complies with all EN 50155 mandatory test items*
- · Wide range 24 to 110 VDC power input

*This product is suitable for rolling stock railway applications, as defined by the EN 50155 standard. For a more detailed statement, click here: www.moxa.com/doc/specs/EN 50155 Compliance.pdf

Hardware Specifications

NOTE The latest specifications for Moxa's products can be found at https://www.moxa.com.

Hardware Introduction

The MPC-2121 computer is compact, well-designed, and ruggedized for industrial applications. Multiple serial ports allow you to connect different devices for data operation, and the reliable and stable hardware platform lets you devote your attention to developing your applications.

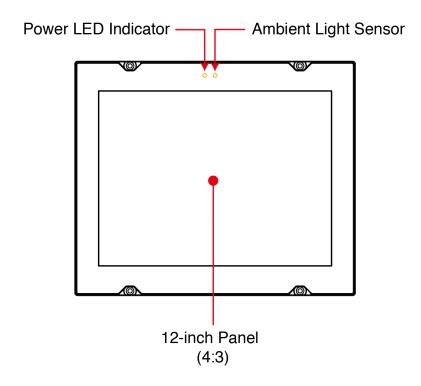

The following topics are covered in this chapter:

Ambient Light Sensor

The MPC-2121 comes with an ambient light sensor located on the upper part of the front panel.

This sensor helps automatically adjust the brightness of the panel with the ambient light conditions.

The light sensor index is divided into 8 levels from L1 to L8; the lower the sensor index, the darker the panel.

The panel brightness index is divided into 10 levels from 1 to 10; the lower is the number, the darker the panel.

Users can configure the light sensor index and the corresponding panel brightness index to get the optimal panel brightness. For example, you can configure the light sensor index L4 in correspondence with the panel brightness index 6.

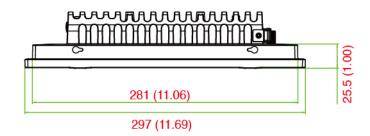

However, to avoid continuous changes to the panel brightness, and to ensure that the ambient light has actually changed, the computer implements a level change hold time to detect if the light sensor has read the new level. If no new level has been detected during the preset hold time, the panel brightness index will be set as the new value. The level change hold time will be from 1 to 30; 0.8 second/unit. The lower the number, the shorter the hold time.

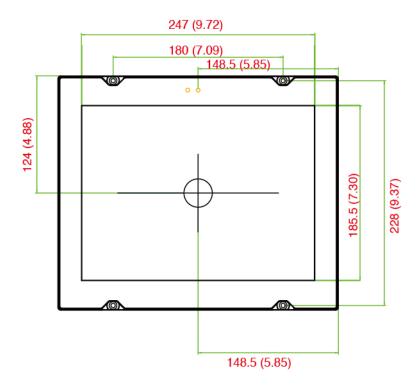

The ambient light sensor is **disabled by default**. When it is manually enabled, the default setting for the light sensor index and the panel brightness index is shown in the following table:

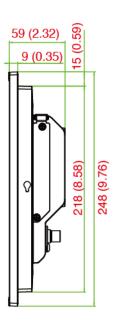

Light Sensor Index (default)	Panel Brightness Index (default)
L1	2
L2	5
L3	5
L4	7
L5	7
L6	9
L7	9
L8	9

For detailed information on configuring the light sensor, refer to MPC-2121 Software User's Manuals.

Hardware Connection Description

In this chapter, we show how to connect the panel computer to the network and to various devices.

The following topics are covered in this chapter:

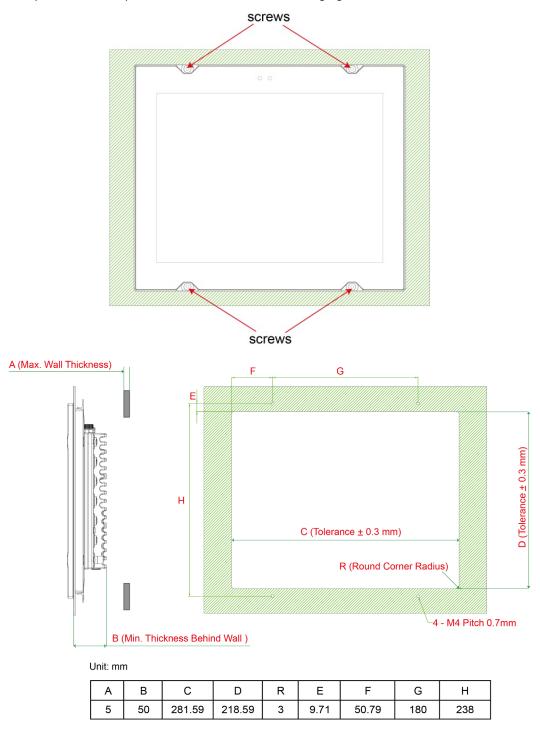

- □ Panel Mounting
 - Front-panel Mounting
 - Rear-panel Mounting
- ☐ Wiring Requirements
- ☐ Temperature Requirements
- ☐ Grounding the MPC-2121
- ☐ Powering On/Off the MPC-2121
- □ Display-control Buttons

 - > Ethernet Ports
 - USB Ports
 - > Audio Port
 - > DIO Port
- ☐ Installing a CFast or SD Card

Panel Mounting

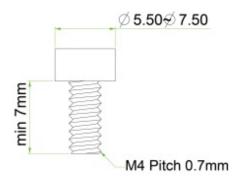

The MPC-2121 can be panel mounted in two ways as explained in the following sections.

Front-panel Mounting

The MPC-2121 can also be mounted using the front panel. Use the four screws on the front panel to attach the front panel of the computer to a wall. Refer to the following figures for the location of the screws.

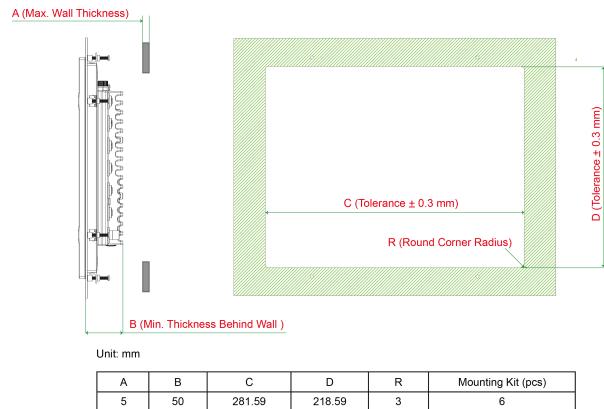

Refer to the figure below for specifications of the mounting screws.

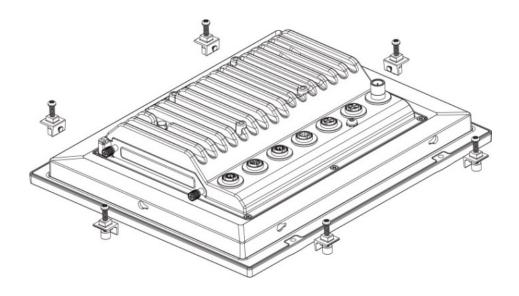

Rear-panel Mounting

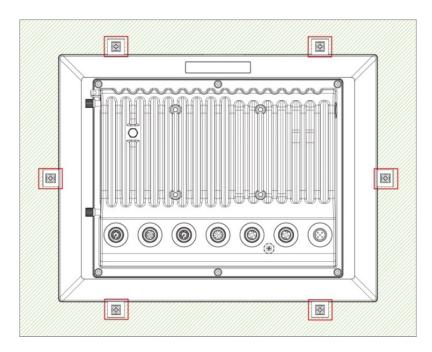

A panel-mounting kit consisting of 6 mounting units is provided in the MPC-2121 package. Refer to the following illustrations for the dimensions and the cabinet space required to panel mount the MPC-2121.

To install the panel-mounting kit on the MPC-2121, follow these steps:

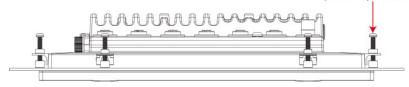

1. Place the mounting units in the holes provided on the rear panel and push the units to the left as shown in the illustration below:

2. Use a torque of 4Kgf-cm to fasten the mounting screws and secure the panel-mounting kit onto a wall.

Wiring Requirements

This section describes how to connect peripheral devices to the panel computer.

You should read and follow these common safety precautions before proceeding with the installation of any electronic device:

• Use separate paths to route wiring for power and devices. If power wiring and device wiring paths must cross, make sure the wires are perpendicular at the intersection point.

NOTE

Do not run signal or communication wiring together with power wiring in the same wire conduit. To avoid interference, wires with different signal characteristics should be routed separately.

- Use the type of signal transmitted through a wire to determine which wires should be kept separate. The rule of thumb is that wiring that shares similar electrical characteristics can be bundled together.
- Keep input wiring and output wiring separate.
- It is advisable to label the wiring to all devices in the system.

ATTENTION

Safety First!

Be sure to disconnect the power cord before installing and/or wiring your MPC-2121 computer.

Wiring Caution

Calculate the maximum possible current in each power wire and common wire. Observe all electrical codes dictating the maximum current allowable for each wire size.

If the current goes above the maximum ratings, the wiring could overheat, causing serious damage to your equipment.

Temperature Requirements

Be careful when handling the unit. When the unit is plugged in, the internal components generate heat, and consequently the outer casing may feel hot to the touch.

We recommend taking the following precautions to minimize heat build-up within the display:

- Position the display within ±40° of the vertical.
- Install an external fan to increase airflow upwards through the display if (a) the display is not positioned within ±40° of the vertical, (b) the ambient temperature exceeds 25°C, or (c) the display is used in a location with minimal ventilation.

Grounding the MPC-2121

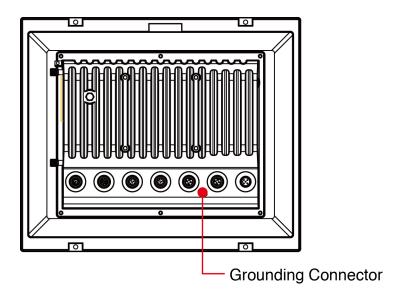

Before you power on the MPC-2121, connect it to a well-grounding metal surface. Grounding and wire routing help limit the effects of noise due to electromagnetic interference (EMI). Run the ground connection from the ground screw to the grounding surface prior to connecting the power.

ATTENTION

This product is intended to be mounted to a well-grounded mounting surface, such as a metal panel.

Grounding: See the figure shown below for the location of the grounding connector. Connect the grounding wire to an appropriate grounded metal surface.

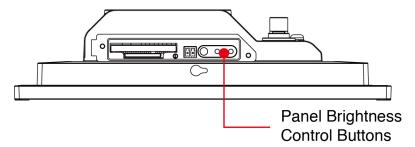

Powering On/Off the MPC-2121

Connect an **M12 Connector to Power Jack Converter** to the MPC-2121 M12 connector and connect at least a 40 W power adapter to the converter. Supply power through the power adapter. After you have connected a power source, press the **Power** button to turn the computer on. It takes about 10 to 30 seconds for the system to boot up.

To power off the MPC-2121, we recommend using the "shut down" function provided by the OS installed on the MPC. If you use the **Power** button, you may enter one of the following states depending on the power management settings in the OS: standby, hibernation, or system shutdown mode. If you encounter problems, you can press and hold the **Power** button for 4 seconds to force a hard shutdown of the system.

Display-control Buttons

The MPC-2121 is provided with two display-control buttons on the right panel.

The display-control buttons can be used as described in the following table:

Symbol and Name		Usage	Function
	Power	Press	-Power on from S4/S5
(l)			-S0 to S3/S4/S5
			-Wake up on S3
		Press and hold for 4 seconds	Power off
+	Brightness +	Press	Manually increase the brightness of the panel
*	Brightness -	Press	Manually decrease the brightness of the panel
-			

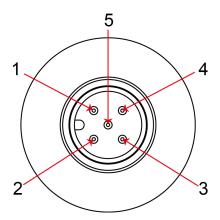

ATTENTION

The MPC-2121 comes with a 1000-nit display, the brightness level of which is adjustable up to level 10. The display is optimized for use in the -40 to 70°C temperature range. However, if you are operating the MPC-2121 at an ambient temperature of 60°C or higher, we recommend setting the brightness level of the display to 8 or less to extend the lifetime of the display.

Connector Description

DC Power Input

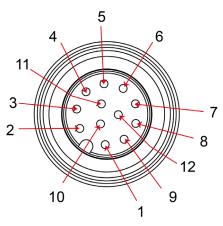

The MPC-2121 can be supplied power through a DC power input using an M12 connector. The DC pin assignments are as shown in the following figure:

Installing a CFast or SD Card

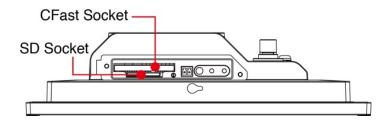

MPC-2121 provides two storage options—CFast card and SD card. The storage slots are located on the left panel. You can install the OS in the CFast card and save your data in the SD card. For a list of compatible CFast models, check the MPC-2121 component compatibility report available on Moxa's website.

To install the storage devices, do the following:

1. Remove the two screws on the storage-socket cover.

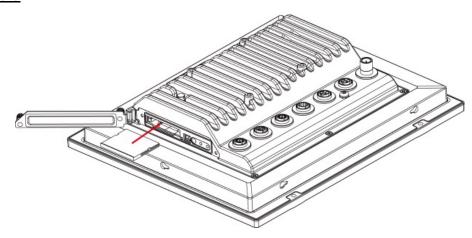

The top slot is for the CFast card while the lower slot is for the SD card, as indicated by the following illustration:

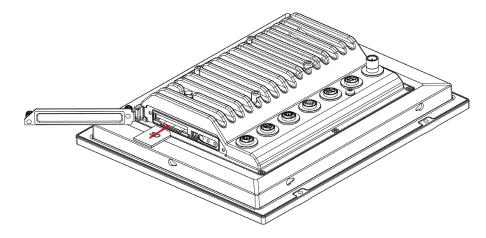

2. Insert a CFast or SD card into the slot using the push-push mechanism.

CFast Card

SD Card

3. Reattach the cover and secure it with screws.

BIOS Settings

In this chapter, we describe the BIOS settings for the MPC-2121 embedded computer. The BIOS is a set of input/output control routines for peripherals. The BIOS is used to initialize basic peripherals and helps boot the operating system before the operating system is loaded. The BIOS setup allows the user to modify the system configurations of these basic input/output peripherals. All of the configurations are stored in the CMOS RAM, which has a backup battery power in case the computer is not connected to a power source. Consequently, the data stored in the CMOS RAM is retained when the system is rebooted or the power is disconnected.

The following topics are covered in this chapter:

Entering the BIOS Setup

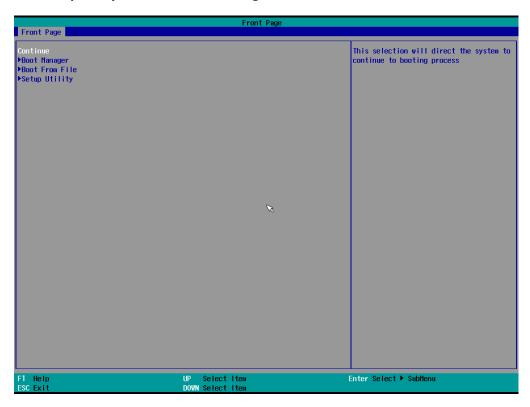

To enter the BIOS setup utility, press the **F2** key while the system is booting up. The main **BIOS Setup** screen appears with the following options:

• Continue: Continue to boot up

Boot Manager: Select the device to boot up
Boot From File: Select the UEFI boot up file

Setup Utility

Click **Setup Utility** to enter the **BIOS configuration**.

When you click **Setup Utility**, a basic description of each function key is listed at the bottom of the screen. Refer to these descriptions to learn how to use them.

Options: AHCI (default), IDE

SATA Speed

Select the speed of the SATA drive.

Options: Gen1 (default), Gen2

Console Redirection

Console Serial Redirect

When the Console Redirection function is enabled, the console information will be output both to the HDMI monitor and through the serial port.

Options: Disabled (default), Enabled

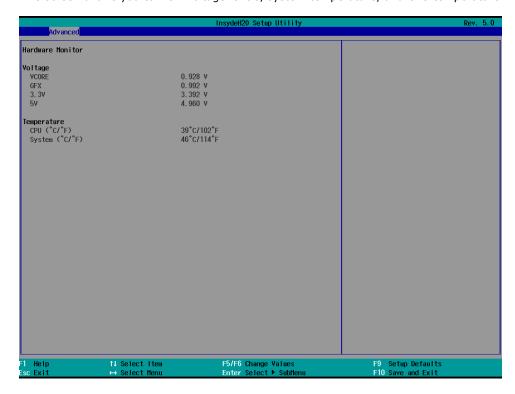

ACPI SPCR Table

This table is used to indicate whether a serial port or a non-legacy UART (Universal Asynchronous Receiver/Transmitter) interface is available for use with Microsoft Windows Emergency Management Services (EMS).

Options: Disabled (default), Enabled

Hardware Monitor

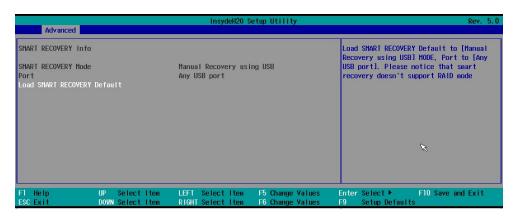

This screen allows you to view voltage levels, system temperature, and CPU temperature.

Note that the voltage values vary depending on the model. The temperature readings shown on the screen are within $\pm 5\%$ of the actual readings. However, the temperature readings are only valid when the ambient temperature is above 0°C.

Smart Recovery Info

This screen shows the Smart Recovery information.

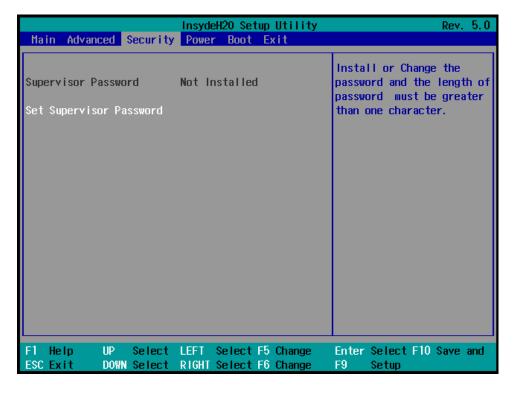

Load Smart Recovery Default

This function allows you to load the default Smart Recovery value to the MPC-2121 panel computer.

Security Settings

This screen allows you to configure a supervisor password.

Set Supervisor Password

This setting allows you to set the supervisor password.

To set a new password, type in the password and then retype the password again to confirm.

To delete the password, enter the existing password in the **Set Supervisor Password** field and leave the new password field blank; then, press [Enter].

Power Settings

This screen allows you to configure the power settings.

ACPI S3 S4

This setting allows you to select both Sleep Mode and Hibernate Mode in the Windows system.

Options: Disabled (default), Enabled.

Wake on LAN

This setting allows you to wake the system up over the LAN from a remote host.

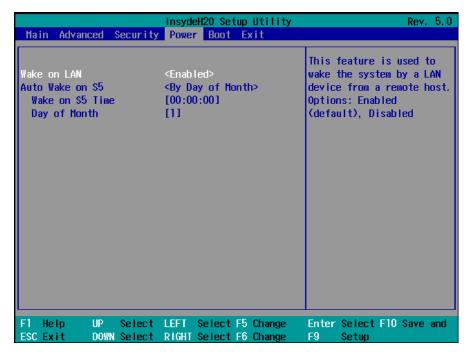

Options: Enabled (default), Disabled.

Auto Wake on S5

This setting allows you to configure the computer to wake from the S5 (Soft Off) state where the power supply remains engaged but is not supplying power to all other parts of the system.

You can set the auto-wake on S5 schedules for the system to perform a soft-reboot at specific times.

Options: Disabled (default); By Every Day (user specifies at what time each day the computer will power up); By Day of Month (user specifies which day of each month the computer will power up)

Boot Settings

This screen allows you to configure boot up settings.

Boot Type

The system will be based on the value used to build the boot environment for different types of operating systems.

Options: Dual Boot Type (default), Legacy Boot Type, UEFI Boot Type

PXE Boot to LAN

This setting allows you to enable or disable the PXE boot to LAN function.

Options: Disabled (default), Enabled

PXE Boot capability

This function is enabled while PXE Boot to LAN is enabled.

Supports Network Stack or Legacy.

Options: Disabled (default), Legacy

Add Boot Options

This setting allows you to add boot order options for new boot devices and removable devices, such as a USB drive.

Options: Last (default), First, Auto

USB Boot

This setting allows you to enable or disable the USB boot function.

Options: Enabled (default), Disabled

Boot Delay Time

This setting allows you to configure the delay time to enter a hot key during POST operations.

Options: 0 Second (default), User define

Automatic Failover

This setting enables or disables the automatic failover options.

Options: Enabled (default), Disabled

Enable: If a boot to the default device fails, the system will try to boot to the next device.

Disable: If a boot to the default device fails, a warning message will be displayed.

Boot Order Priority

This setting allows you to determine the booting priority of the boot devices. If this setting is EFI first, the EFI device will boot first; if it is Legacy first, the legacy device will boot first.

Options: Legacy first (default), EFI first

Legacy

Normal Boot Menu

This setting allows you to configure the boot order. To change the boot order, press the "-" or "F5" key to move down to an item in the list, and the "+" or "F6" key to move up.

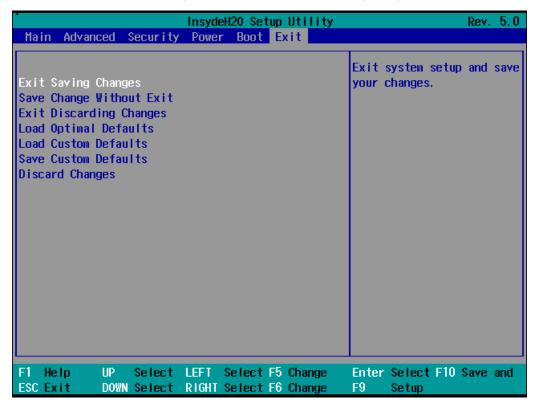

Options: Normal, Advance (default)

EFI

Use this setting to adjust the boot order settings for an EFI device.

Exit Settings

This screen shows the various options to exit from the BIOS setup utility.

Exit Saving Changes

This option allows you to exit the BIOS setup utility and save the values you have just configured.

Options: Yes (default), No

Upgrading the BIOS

This section describes how to upgrade the BIOS.

WARNING

An improper BIOS upgrade process may permanently damage the computer. We strongly recommend that you contact Moxa technical support for assistance to obtain all the necessary tools and the most up-to-date advice before attempting to upgrade the BIOS on any Moxa device.

Step 1: Create a Bootable USB Disk

Before upgrading the BIOS, create a bootable USB drive as a system rescue device.

A useful software suite for creating USB RAM drives is called "Rufus", which can be used create a bootable RAM drive for your computer.

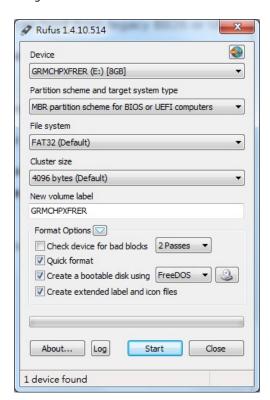

Complete the following steps to create a bootable USB disk using Rufus:

 Start Rufus* and then in the "Device" drop-down list select the USB device that you want to use as a bootable disk.

*Rufus official website:

https://rufus.akeo.ie/?locale=en_US

- Select MBR partition scheme for BIOS or UEFI computers from the "Partition scheme and target system type" drop-down list so it can boot from a legacy BIOS or UEFI.
- Select FAT32 (Default) from the "File system" drop-down list.
- Select 4096 bytes (Default) from the "Cluster size" drop-down list.
- 5. Enter a drive name in the "New volume label" input box.
- Select the options: Quick format, Create a bootable disk using FreeDOS, and Create extended label and icon files.
- Click **Start** to format and create the bootable USB drive.

ATTENTION

When you use a USB drive larger than 4 GB, you will need to convert the file system type to FAT32.

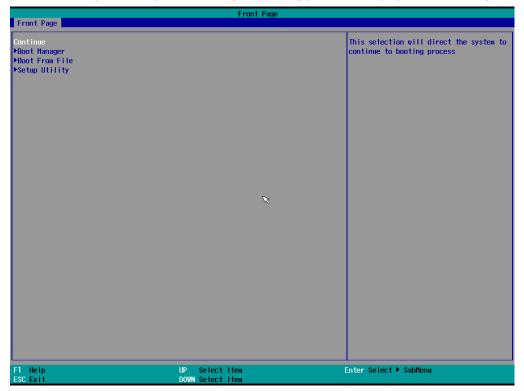

Step 2: Prepare the Upgrade File

You must use the BIOS upgrade installation file to upgrade the BIOS. Contact Moxa technical support for assistance.

- Get the BIOS upgrade installation file.
 The file name should be in the format: MPC-21211xxx.exe (where "xxx" refers to the version numbers).
- 2. Copy the file to the bootable USB drive.

Step 3: Run the Upgrade Program on the MPC-2121 Computer

1. Reboot the computer, and press F2 during the booting process to display the Boot Manager.

2. Select USB Disk as the first boot source and press [Enter] to continue.

 When the computer finishes booting up, a command window appears. Go to the directory where the upgrade file is located. For example, if the upgrade file is stored in the MPC-2121 folder, type cd MPC-2121.

C:\cd MPC-2121

Run the upgrade program by typing 21211010.exe
 Note that the filename for the upgrade program may vary depending on the version.

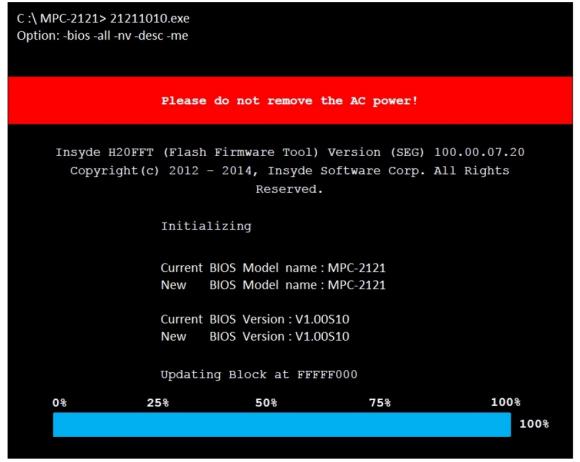

C:\ MPC-2121>21211010.exe

5. The upgrade program will run automatically. Wait until the procedure is complete.

ATTENTION

Do NOT remove the power supply during a BIOS upgrade.

6. When the upgrade is finished, the computer automatically reboots. You may check the BIOS version on the Main page of the BIOS setup utility.

BIOS Version V1.00S10
Project Name MPC-2121

Display Resolution

This chapter describes how to install the graphics driver for your MPC-2121. After installing the driver, you will be able to use the graphic tools described here to adjust the display resolution of your panel computer.

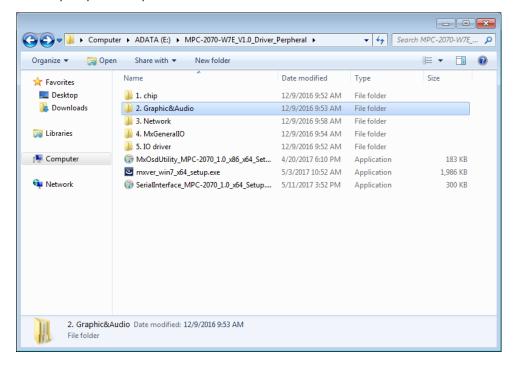

The following topics are covered in this chapter:

- ☐ Installing the Graphics Driver
- □ Adjusting the Display Resolution

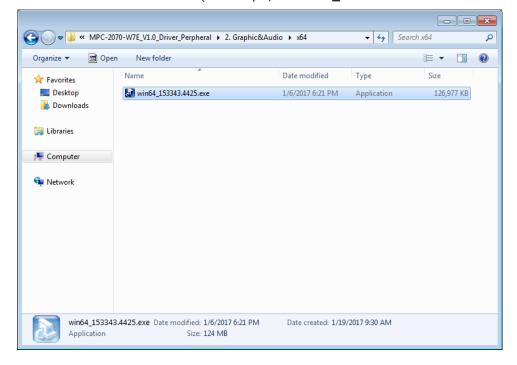

Installing the Graphics Driver

A stock graphics driver for Windows Embedded Standard 7 is available for download from the MPC-2121 product page on Moxa's website. To install the driver, do the following:

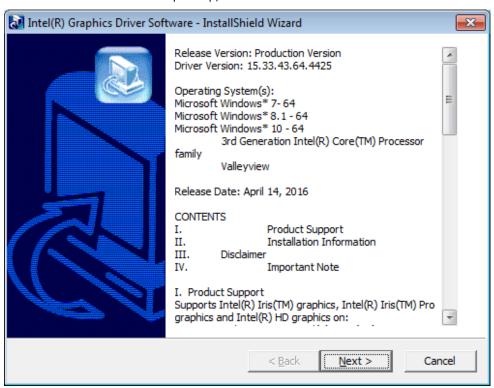

- 1. Browse to the **Driver** folder and open the **MPC-2121-W7E_V1.0_Driver_Perpheral** folder.
- 2. In the **2.Graphic&Audio** folder, open the **x86 (32-bit) or x64 (64-bit)** folder depending on the platform used in your panel computer.

3. Double click on the executable file (for example, the win64_153343.4425 file in the x64 folder) to run it.

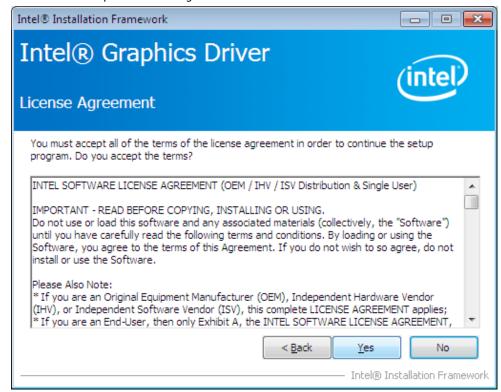

4. In the installation wizard that opens up, click **Next** to continue.

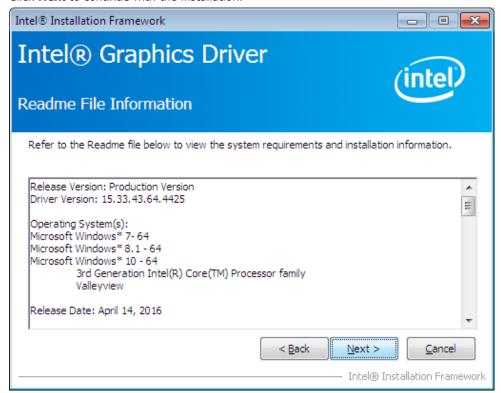

5. Click **Next** to start the installation process.

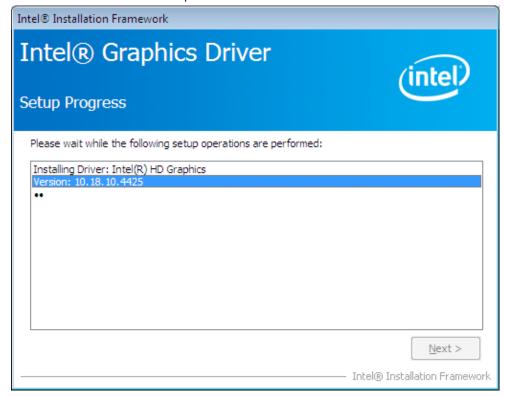

6. Click **Yes** to accept the license agreement.

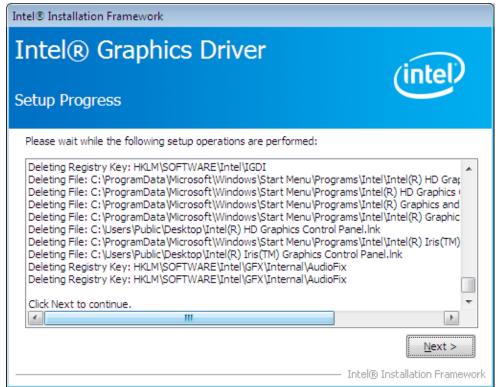

7. Click Next to continue with the installation.

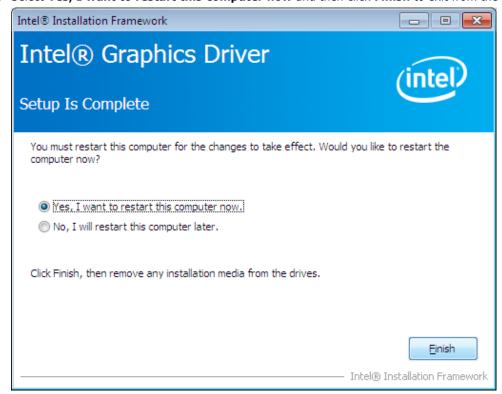

8. Wait until the installation is completed.

9. Click **Next** to continue with the setup process.

10. Select Yes, I want to restart this computer now and then click Finish to exit from the wizard.

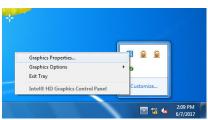

After your MPC-2121 reboots, you can use the Intel graphics tool to adjust the display resolution.

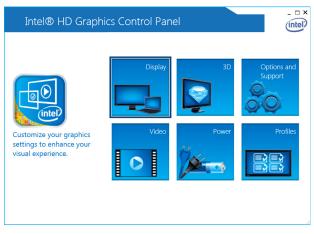

Adjusting the Display Resolution

Follow these steps to adjust the display resolution of your MPC-2121:

1. Right-click on the Intel HD Graphics Control Panel icon on the taskbar and select **Graphics Properties**.

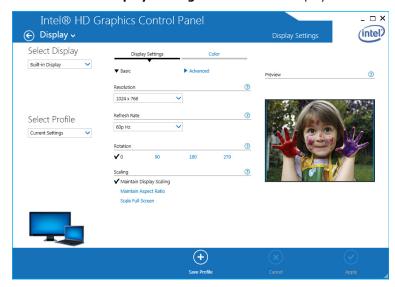

2. Select Display.

You can now adjust the resolution, refresh rate, and the display rotation settings.

3. Select **Maintain Display Scaling** to maximize the display so that it fits the screen.

4. Click Apply.

Serial Port Driver and Utility

This chapter describes how to install the serial port driver. After installing the drivers, you can configure the serial interface mode (RS-232/422/485) for the software selectable serial port.

The following topics are covered in this chapter:

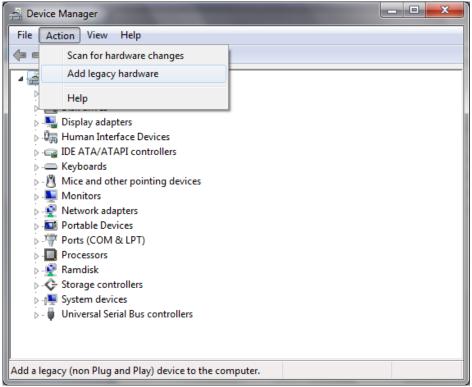

- □ Overview
- ☐ Installing the MxGeneralIo Driver
- ☐ Installing the Serial Interface Utility
- □ Configuring the Serial Interface Mode

Overview

The MPC-2121 supports the following serial modes: **RS-232, RS-422, 2-wire RS-485, and 4-wire RS-485**. These modes can be configured on COM1 and COM2. Before you do configuration the serial port, you should install the "MxGeneralIo" driver from the driver list.

Installing the MxGeneralIo Driver

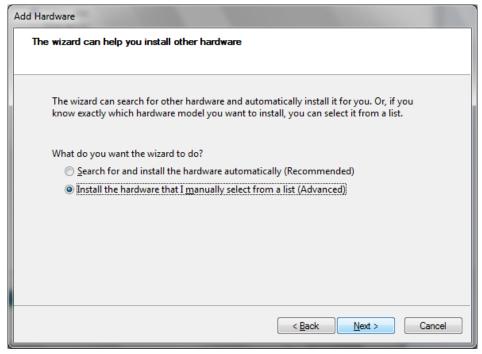

1. Open Device Manager from your MPC-2121 and select Add legacy hardware

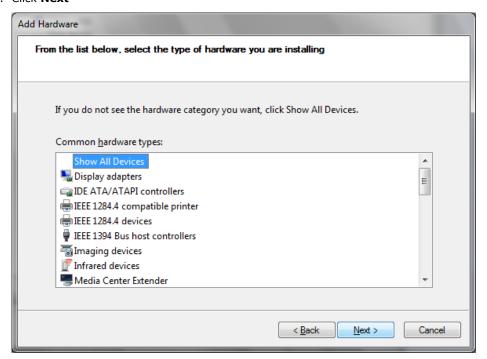

2. Click Next

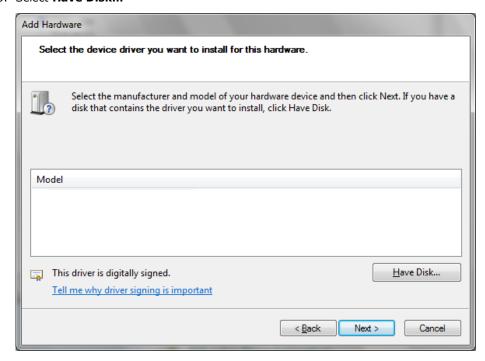

3. Select the second item **Install the hardware that I manually select from a list (Advanced)** and click **Next**

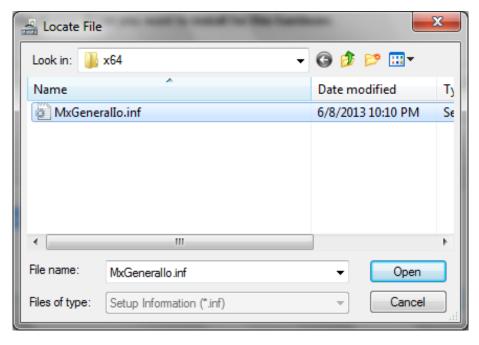

4. Click Next

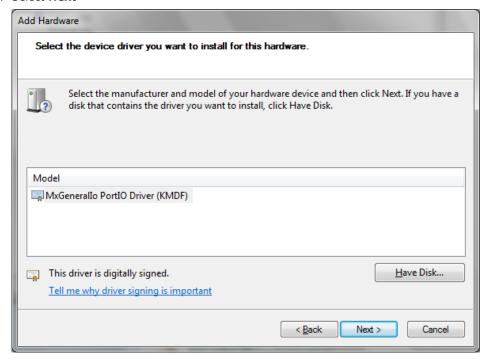

5. Select Have Disk...

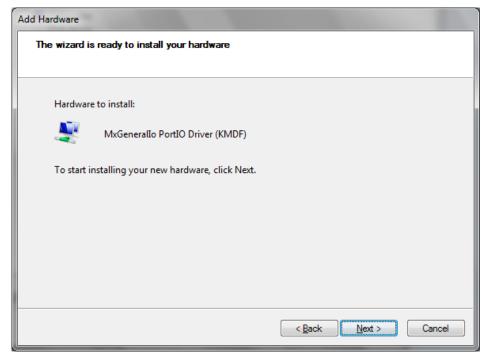

6. Point to the path **Driver\MPC-2121-W7E_V1.0_Driver_Perpheral\4.MxGeneralIO\x64** and select **MxGeneralIo.inf**

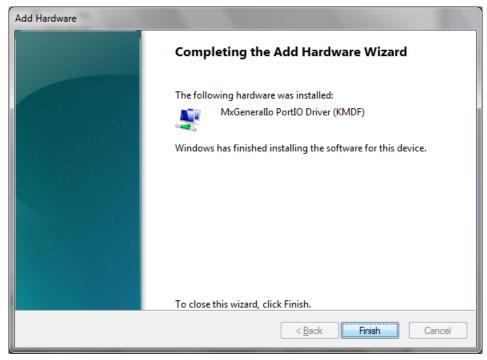

7. Select **Next**

8. Select Next

9. Select Finish

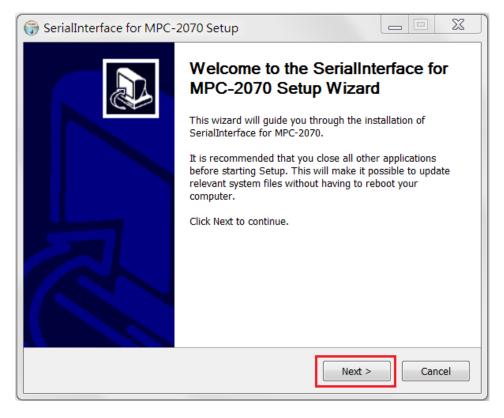

10. Double check if the driver has successfully installed.

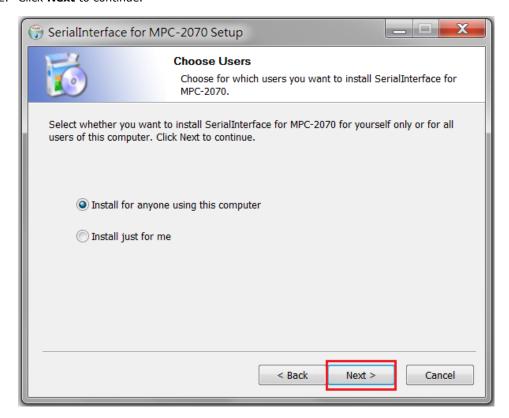

Installing the Serial Interface Utility

Complete the following steps to install the SerialInterface utility:

The SerialInterface setup *.exe file can be found on the product DVD: <Software
 <p>DVD>\Utility\MPC-2121_SerialInterface\ to. Execute "SerialInterface_MPC-2070_1.0_x64_Setup.exe"
 and when the application program launches, click Next to continue, and then click Next again.

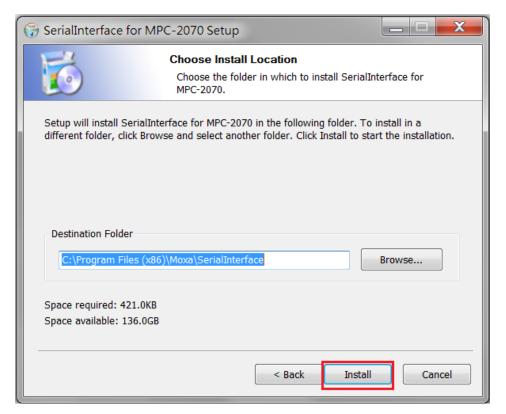

2. Click Next to continue.

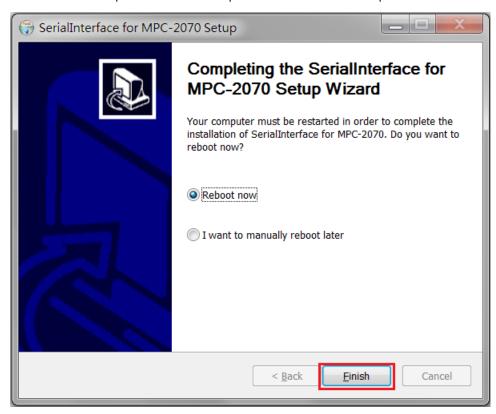

The default destination folder is **C:\Program Files(x86)\Moxa\ SerialInterface**.

3. Click Install to continue.

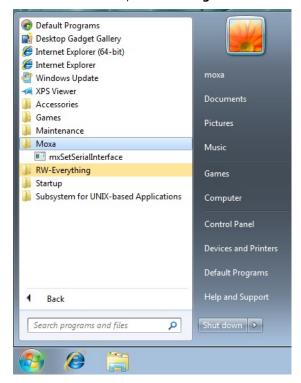

4. Click **Finish** to complete the installation process and reboot the computer.

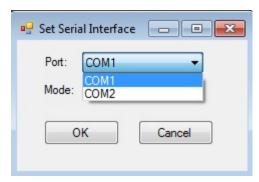

Configuring the Serial Interface Mode

Complete the following steps to configure the interface mode:

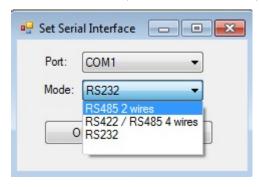

1. From the Start menu, Click **All Programs** → **Moxa** → **mxSetSerialInterface**.

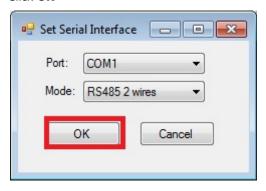

2. Select a port (COM1 or COM2).

3. Select the mode that you want to use for the port selected in the previous step.

4. Click OK
